

Lettuce Grow Kit Guide

So you got yourself a Grow Kit! Congrats!

We've included this handy guide for you to make your growing experience simple and fun. Follow these steps, and you'll be watching healthy plants grow in no time!

CONTENTS

- **5 GeoPot Squat Pots** - 5 gal
- **Geoflora VEG Organic Fertilizer** - 4 lb / 2 kg
- **ECOWORKS EC Botanical Insecticide** - 4 oz / 120 ml

SETUP

Container:

Unfold and prop up your GeoPot in the area where you would like to set it up.

Placement:

Place your filled GeoPot in a location that receives full or part sun at least 6 hrs per day for your lettuce to thrive! GeoPot has porous fabric sides, so any excess water will drain out of the pot. Be sure to choose a spot where excess water can drain away properly without resulting in standing water, or consider adding a saucer or plant tray to collect runoff.

Soil:

Fill your GeoPot with your desired growing media. Choose whatever soil you're comfortable with!

PLANTING

Planting Seeds:

To plant lettuce seeds, poke a hole in the soil about ¼ - ½” deep and place your seed, covering lightly with soil. Water and keep the soil moist until the seed sprouts.

Planting Starts:

For lettuce starts, choose one that is green, healthy, and stout--leggy starts can have growth problems later. Pull the plant from the container, lightly and gently tease and fluff its roots, and then place it in your GeoPot.

PLANT CARE

Watering:

Water your plant every two or three days to keep the soil evenly moist. If the plant dries out more quickly due to hot weather, water every day as needed.

Because GeoPot Fabric Pots have superior aeration, they may require more frequent watering. It's always a good idea to check your soil moisture levels by sticking your finger in up to your first knuckle. If the soil feels damp to the touch, your plant doesn't need water. If it's dry, your plant is thirsty!

Fertilizing:

Geoflora comes in both VEG and BLOOM, which have similar ingredients in different ratios. We've chosen Geoflora VEG because it's the best all-purpose fertilizer for your lettuce grow!

Amend your soil prior to planting by mixing ½ cup of Geoflora with the soil in the container and watering it in 24-48 hrs before transplant. Once your plant is in the container, you'll continue to fertilize by adding a top-dress after each lettuce harvest. Do this by pouring ½ cup of Geoflora on top of the soil 4-6” from the base of the plant and watering thoroughly.

Do not mix with water to apply—Geoflora is not water-soluble.

Pest Control:

Apply ECOWORKS EC as a safe and organic preventative to combat pests like whiteflies, aphids, and mites.

Shake well before use. Store above 45 degrees Fahrenheit. For general foliar spray application, dilute 10ml per one gallon of water and mix. Spray once every 10-14 days. For more detailed instructions, see [Ecoworks EC Instructions](#). Use protective clothing when applying, and wait 4 hours before re-entering the area after use.

*Pro Tip: Apply this product during early morning or late evening for best results. It's best to take proactive steps and use controls like ECOWORKS EC before pest problems start!

Manicuring:

Prune or trim leaves and stalks that are yellowing or showing signs of disease.

Harvest:

Harvest your lettuce when the plant is robust and the leaves are at least 3" long. Be sure to check the instructions for your specific cultivar. If you want a perpetual harvest, do not harvest all of the leaves, instead allowing the lettuce to continue to grow and harvesting a few leaves at a time. You can continue harvesting lettuce until the plant bolts to flower and the leaves become bitter.

Now that you've got everything you need, it's time to get growing!
